Name: _____

Date: _____

Medication II

You are responsible for determining the amount of medication to give a patient. You don't have access to the medication label, but your coworker remembers that it worked out to 1.3 milligrams (mg) of medication for every 10 pounds (lb) of body weight. If your coworker is correct, and the patient weighs 175 pounds, how much medication should this patient be given?

Show your work, and write your answer in a complete sentence.
