Rolling Dice - 2 of any size

Take two dice of any size. Typically when we roll a pair of dice, we add up the numbers showing on each die to get a result. If you roll your two dice 100 times, what result do you think you'll get most often? What result do you think you'll get least often?

Make a chart to record your results. Do this experiment, and record your results. How close were your actual results to your predictions?

Show your work, and write your answer in a complete sentence.
